Indian Head Start is unique because it helps fulfill the federal government’s trust responsibility to protect the interests of tribal nations and communities. Tribal nations are sovereign entities with inherent, recognized powers of self-determination and self-governance. The Head Start Act preserves and reinforces the federal government’s commitment to work with tribal nations on government-to-government basis. Specifically, the Act requires annual consultations with tribal governments operating Indian Head Start programs.

“Consultation is an enhanced form of communication that emphasizes trust, respect, and shared responsibility. It is an open and free exchange of information and opinions among parties, which leads to mutual understanding and comprehension. Consultation is integral to a deliberative process that results in effective collaboration and informed decision-making with the ultimate goal of reaching consensus on issues. ACF will consult, as defined in this document and as practicable and permitted by law, with Indian tribes before taking action that will significantly affect Indian tribes. The ACF policy is to conduct timely, respectful, meaningful, and effective two-way communication and consultation with tribes wherein elected officials and other authorized representatives of the tribal governments provide input prior to any action that either ACF or one or more tribes determines has or may have significantly affected one or more Indian tribes, and before any such action or further action is taken. An action that triggers consultation is any legislative proposal, new rule adoption, or other policy change that either ACF or a tribe determines may significantly affect Indian tribes.”

CLASS and Designation Renewal System
The Head Start Act of 2007 does not specifically require the use of the CLASS (Classroom Assessment Scoring System). Sec 641A (c) (2)(F) include as part of the reviews, a valid and reliable research-based observational instrument, implemented by qualified individuals with demonstrated reliability, that assesses classroom quality, including assessing multiple dimensions of teacher-child interactions that are linked to positive child development and later achievement. AIAN Tribal grantees are concerned and hold issue with the use of CLASS generally, and more specifically, as a measurement for determining if a grantee goes into the Designation Renewal process.

We are concerned that “principles of scientific research” for supporting the assessment approach have not been tested with American Indian and Alaska Native populations, and therefore the reliability and validity relative to education activities and teacher performance is highly suspect. We have grave concerns regarding the cultural appropriateness and reliability to the AIAN zero to five populations. Teachstone, the developers of CLASS, cannot provide research data on Native American Alaskan Native children to show cultural and behavioral norms or differences. There are “white-paper” references on the importance of cultural competency and respect, but no real information on how it impacts tribal teachers or children.

Of particular concern is the reliability of CLASS reviewers in observing child and teacher interaction and instructional support in native communities. Currently there is inadequate training for reliable CLASS reviewers to consider cultural differences during the review process, and the system does not allow time for the program to make reviewers aware of cultural differences they may observe.

CLASS is a quality improvement system for teaching, but programs are hampered in using it as such because of the limited data OHS provides from a review. Currently OHS releases only program level data, but not classroom specific data or insight into specific issues. This does not allow programs to develop individualized coaching and professional development plans to meet the direct needs of staff.

Suggested OHS Action:
- Identify and use proficient reviewers that demonstrate knowledge, expertise, and experience in working with AIAN populations and have demonstrated abilities to work with diverse cultural and ethnic populations.
- A qualitative study should be conducted to identify the culture-specific variations of the CLASS domains, dimensions, indicators, and behavioral markers. Such a study should be carefully designed in active coordination with NIHSDA, the Tribal Early Childhood Research Center, and tribal leaders to ensure adequate representation from different tribes. Information from this study should be used to either modify the CLASS’s structure or develop a new instrument.
- Provide additional resources and supports for bringing the AIAN grantees up-to-speed on implementing and using CLASS. Additional funds to support the purchasing of CLASS materials, attending training programs, and added additional funding to the CLASS contract for the logistics and facilitation of training events.
- Greater transparency to programs of CLASS data from their review to allow programs to target professional development.

Staff Qualifications:
Indian Head Start programs have great difficulty in recruiting and retaining teachers and teacher aides.
- Difficulty in recruiting qualified applicants with an existing CDA, AA or BA in Early Childhood Education.
➢ **CDA Challenges:** Potential employees are not aware of the CDA credential prior to seeking employment with Head Start. To expect that programs can recruit and hire someone with an existing CDA is not possible. It is very rare that a job applicant already has a CDA. It is only after the program hires the employee that the CDA process can begin. Finding mentors and other support staff that are easily accessible to Tribal communities as part of the CDA process is a difficult task for many programs.

➢ **AA/BA Challenges:** On many of the reservations there are not institutions of Higher Learning where potential employees can obtain an A.A or B.A. in Early Childhood Education. Many reservations are located in extremely rural areas making distance learning institutions inaccessible for rurally located tribal communities.

- **Teachers earn required degrees and then are able to take higher paying positions.** Head Start employees who obtain a degree are able to seek employment with the local school system or other early childhood programs for a higher paying wage. Due to inadequate funding levels, Tribal Head Start Programs are unable to compete with the wages that other schools and ECE programs can offer to employees. They are able to earn a higher wage with fewer requirements creating perpetual vacancies within the Head Start program.

- **Funding to maintain qualified teaching staff.** The Head Start Act continues to increase the educational requirements for teaching staff but does not provide adequate funding levels to tribal programs that would allow programs to increase current wages to be competitive and to improve starting wages/wage scales of the program.

- **Minimum wage increases.** Many cities and states have voted to raise their minimum wage with increases over the next few years. This coupled with increasing healthcare costs will force programs to adjust their entire pay scales to avoid wage compression (when the lowest paid workers, such as substitute teachers, edge closer to the higher paid employees with degrees or even managers). Without increased funding or an option to renegotiate a program's cost per child, many programs will face reducing already overburdened staff and/or compromising program elements – or worst case, shutting down.

**Suggested OHS Action:**
- Grant waivers for staff that do not meet the degree requirements who have a professional development plan and are showing progression
- Allow programs to renegotiate their funded enrollment to allow for the proper compensation and retention of qualified staff.

**AIAN Specific Research and Reports:**
The Department of Health and Human Services, Administration of Children and Families and the Office of Head Start have demonstrated over a good number of years (20-30) that it was remiss in meeting the administrative requirements stipulated in numerous (7) Head Start Acts as Amended relating to the research/development for AIAN specific research. The U.S. Congress's intent in placing Indian specific research requirements in the Acts was to assist DHHS and its agencies in making informed decisions regarding the targeted Indian population, funding formulas, condition and lack of appropriate facilities, effects of rural and remote service delivery areas, learning and development styles of young diverse Indian children, effects of services, etc. There has been limited or no production on the research items as required by the 2007 Act let alone previous Head Start Acts.

**Suggested OHS Action:**
- An updated research status report be developed by ACF and distributed widely to Tribal grantees, Tribally Controlled Colleges/Institutions, NIHSDA and the National American Indian Alaska Native Head Start Collaboration Office. A summary of research and publication on Early
Childhood for American Indian and Alaska Native children was last prepared in 2003 - nearly 20 years ago.

- **Head Start Facilities Report.** Sec 650(b) of the Head Start Act requires that “at least once during every 5-year period, the Secretary shall prepare and submit, to the Committee on Education and Labor of the House of Representatives and the Committee on Health, Education, Labor and Pensions of the Senate, a report concerning the condition, location, and ownership of facilities used, or available to be used, by Indian Head Start agencies (including Alaska Native Head Start agencies) and Native Hawaiian Head Start agencies.” This report has only been submitted once in 2015 since the HS Act was reauthorized in 2007.

- Sufficient research dollars be allocated by OHS for actualizing its required charge to conduct specific research affecting Tribal Grantees prior to other areas in the Act or OHS internal priorities. For example:
  - Undertake a study or set of studies designed to focus on the American Indian and Alaska Native Head Start-eligible population, with a focus on issues such as curriculum development, availability and need for services, appropriate research methodologies and measures for these populations, and best practices for teaching and educating American Indian and Alaska Native Head Start Children.
  - Accurately determine the number of children nationwide who are eligible to participate in Indian Head Start programs each year; document how many of these children are receiving Head Start services each year; and to the extent practicable, to ensure that access to Indian Head Start programs for eligible children is comparable to access to other Head Start programs for other eligible children. A report was submitted to Congress in 2010 outlining a plan to carry out this requirement, but the results of the study have not been provided to NIHSDA.
  - Make the funding decisions required in section 640(a)(4)(D)(ii), after completion of the studies required in that section, considering:
    - the Federal government’s unique trust responsibility to American Indians and Alaska Natives;
    - limitations faced by tribal communities in accessing non-Federal sources of funding to supplement Federal funding for early childhood programs; and
    - other factors that uniquely and adversely impact children in American Indian and Alaska Native communities such as highly elevated poverty, unemployment, and violent crime rates, as well as depressed levels of educational achievement and limited access to non-Federal health, social and educational resources.

**Federal Monitoring:**

There needs to be a continued effort to assure cultural competence for federal reviews and monitoring activities. Since the inception of the Federal On-Site Review Process, Tribal grantees have consistently voiced concerns over the lack of knowledgeable and skilled federal on-site teams, the lack of professionalism of team leaders and reviewers, and the lack of cultural sensitivity of teams. Many reviewers lack an understanding of Tribal governments and the unique relationship they have with the federal government, let alone have the expertise inclusive of cultural awareness and responsiveness of diverse cultures. More effort should be made to recruit culturally competent reviewers from the Native community.

**Suggested OHS Action:**

- Ensure the federal monitoring contractor provides cultural competence training regarding the uniqueness of Tribal governments and cultures
- Increase recruitment from the Native community
• Simplify the process for Native reviewers to apply and to identify a preference for reviewing native programs

**AIAN Head Start Facilities:**
Tribal Head Start grantees have reported the need for facility improvements that include both major and minor renovations as well as the need for new construction. Often there is a lack of alternate facilities in rural and remote areas, forcing grantees to spend significant portions of their budget to maintain environmentally safe facilities. In FY2015 the Office of Head Start submitted their Report to Congress on American Indian Alaska Native Head Start Facilities. In it OHS reported that:

• 36% of facilities had documented concerns including worn interiors, cracked ceilings, poor insulation and overall deterioration due to the impact of adverse weather conditions.
• 37% of facilities had concerns related to building materials and conditions, such as mold, leaks, flooding, and gas or sewage odors.
• 15% of centers have HVAC systems that are improperly ventilated and experience difficulty in regulating temperature. Some centers attempt to augment systems with window AC units and space heaters, which add energy costs and can pose fire safety risks.
• 14% of the restrooms are not age-appropriate (sized for adults, not children), or the ratio of restrooms to children is too low.

Twenty-five percent of the centers assessed are now 40 years of age. Investing in short term maintenance and repairs rather than renovations or new construction designed for the long-term lends itself to inefficient spending. Centers that are rapidly deteriorating due to old age, and/or have a major structural issue are likely contributing to other patterns such as under enrollment, a higher cost per child, and issues AIAN programs encounter when expanding services and partnering with child care providers. The cost to renovate or perform outstanding maintenance and repair of the 506 centers nationwide is estimated to be $69.64 million.

**Suggested OHS Action:**
• Create opportunities for grantees to apply for funding for renovation or construction of facilities.
• Provide direct training on facility topics regarding construction and renovation requirements, including how to prepare an application for facilities funding.
• Update on the FY2020 Report to Congress on American Indian Alaska Native Head Start Facilities process and timeline. Once the report is completed, it should be sent to Tribal Leaders.

**ACF and OHS Head Start Tribal Consultations Process:**
AIAN grantees appreciate the opportunity tribal consultations potentially offer for expressing issues and concerns affecting the delivery of HS/EHS services for "better meeting the needs of Indian, including Alaska Native, children and their families (Head Start Act, 2007)." Tribes see Head Start, inclusive of Early Head Start, as the foundation for building future leaders within tribal communities through its preparation of young children and their families in life-long learning, growth and development.

Since the inception of the formal Tribal Consultation in 2008, the consultation sessions have not been productive, have been inconsistent in their facilitation, and have been less than effective in producing outcome results directed at improved early childhood services within Tribal Communities.

Tribal grantees are seeking continued improvement in the tribal consultation process where funding allocations, distribution formulas and other issues affecting the delivery of Head Start and Early Head Start services are openly discussed and resolved within a timely manner.
Suggested OHS Action:

- Have an open discussion with Tribal leadership to evaluate how the consultation process can be more effective to ensure satisfaction and true government to government relationships. (Add as an agenda item during the tribal consultation)
- Sufficient notice (at least 60 days) of scheduled consultations needs to be given to Tribal leadership to plan their attendance. When consultations are announced one at a time throughout the year it is difficult to determine which location would be most convenient.
- Reports of the consultations should include a record of topics discussed with clarifications and intended action steps and should be sent directly to all AIAN grantee tribal leadership.

Funding Timelines

NIHSDA is deeply concerned by the short amount of time given to our grantees to apply for Head Start and Early Head Start funds. Many programs are unable to apply for funding despite documented need because of short application windows.

AI/AN programs are uniquely situated in comparison to other Head Start centers because many, if not most, operate as part of a Tribal government. Decisions related to the operation of AI/AN Head Start programs must be pre-approved by Tribal council or another governing body of the Tribe. Many Tribal governments are not operating at full capacity due to the COVID pandemic, and their agendas are often taxed by other pressing matters. The combination of lengthy grant applications and tribal government responsibilities puts our programs at a significant disadvantage in meeting federal deadlines.

Suggested OHS Action:

- We urge OHS to extend the deadline for applying for AI/AN Head Start and Early Head Start funds in recognition of Tribal sovereignty. Going forward, we recommend an open application period of at least 90 days for all AI/AN Head Start funding opportunities. We urge the OHS Director to exercise her administrative authority to make this change or, in the alternative, to work with Congress on this matter for the next Head Start reauthorization act.

Redistribution of Funds

When AIAN grantees relinquish or have a reduction in funding, the losses are detrimental to AI/AN Head Start overall and especially to the individual communities this critical program was designed to support. It is vital that these award amounts remain in Region XI. This is a matter not only of moral responsibility to the AI/AN children that rely on Head Start for high quality, nurturing, and culturally appropriate early childhood education, but also a legal requirement under the “Improving Head Start for School Readiness Act of 2007,” Pub. L. 110-134. Section 641A(h)(6)(A)(i) mandates: If such funds are derived from an Indian Head Start program, then such funds shall be redistributed to increase enrollment by the end of the following fiscal year in 1 or more Indian Head Start programs.

There have been past instances in which funds derived from AI/AN Head Start grant awards were relinquished or otherwise returned to the Office of Head Start and were redistributed outside of Region XI. Attempts to obtain information from OHS on processing of these funds and their ultimate destinations were unsuccessful. With such large sums of federal funding at issue this is simply unacceptable. We fear that the redistribution of funds outside of Region XI may happen again with future relinquished program funds and reduced grant awards.

Suggested OHS Action:

- Share the process currently used to track AI/AN Head Start and Early Head Start grants and redistributions. Greater transparency in the administration of program funds is urgently needed for accountability and good governance.
- Provide an annual report of all reclaimed AI/AN funds and all redistributions of those funds.
